| :---: | :---: |
| 1 | If the velocity $\boldsymbol{v}$ is related to acceleration $\boldsymbol{a}$ and distance $\boldsymbol{x}$ by the following expression: $\boldsymbol{v}^{2}=\mathbf{2 a x} \boldsymbol{x}$. The power $\mathbf{p}$ that makes this equation dimensionally consistent is: <br> A) 0 <br> B) 1 <br> C) -1 <br> D) 2 |
| 2 | In one-dimensional motion, if an object moves from one place to another and then back to its original place, its average speed: <br> A) is positive. <br> B) is negative. <br> C) is Zero <br> D) depends on the direction |
| 3 | A car is traveling at a constant speed of $\mathbf{2 0} \mathbf{~ m} / \mathbf{s}$. The driver of the car had to accelerate his speed by $3 \mathrm{~m} / \mathbf{s}^{\mathbf{2}}$ once he passed a hidden police trap (نقطة رصد للسر عات اللخالفة). A police car starts from rest just as the speeder car passes it. What would be the acceleration of the police car to catch this speeder car in one minute? <br> A) $4.4 \mathrm{~m} / \mathrm{s}^{2}$ <br> B) $2.5 \mathrm{~m} / \mathrm{s}^{2}$ <br> C) $5.2 \mathrm{~m} / \mathrm{s}^{2}$ <br> D) $3.7 \mathrm{~m} / \mathrm{s}^{2}$ |
| 4 | A man wants to measure the depth of a well (عمق بئر) by using a small stone and a stopwatch, so he dropped the stone inside the well. His stopwatch measured 2.8 seconds when the stone clashed with the water surface. What is the depth of this well? <br> A) 47.3 m <br> B) 32.2 m <br> C) 38.4 m <br> D) 55 m |
| 5 | If $\overrightarrow{\boldsymbol{A}}+\overrightarrow{\boldsymbol{B}}=\overrightarrow{\boldsymbol{C}}$ and their magnitudes are given by $\mathrm{A}+\mathrm{B}=\mathrm{C}$, then the vectors $\overrightarrow{\boldsymbol{A}}$ and $\overrightarrow{\boldsymbol{B}}$ are oriented: <br> A) perpendicular relative to <br> B) parallel to each other <br> C) antiparallel to each <br> D) It is impossible one other (in the same direction) other (in opposite to know from directions) the given information |

A) 3.0
B) 7.4
C) 5.0
D) 6.1

A vector $\overrightarrow{\boldsymbol{A}}$ has components $\mathbf{A}_{\mathbf{x}}=\mathbf{1 2} \mathbf{m}$ and $\mathbf{A}_{\mathbf{y}} \mathbf{= 5} \mathbf{~ m}$. The angle that vector $\overrightarrow{\boldsymbol{A}}$ makes with the +x -axis is:
7
A) $22.6^{\circ}$
B) $12.6^{\circ}$
C) $32.6^{\circ}$
D) $2.6^{\circ}$

At $\boldsymbol{t}=\boldsymbol{0}$, a particle leaves the origin with a velocity of $\mathbf{9} \boldsymbol{m} / \boldsymbol{s}$ in the positive $\boldsymbol{y}$ direction and moves in the $\boldsymbol{x y}$ plane with a constant acceleration of $\boldsymbol{a}=(\mathbf{2 i}-\mathbf{j}) \boldsymbol{m} / \mathbf{s}^{\mathbf{2}}$. At the instant the $\boldsymbol{x}$ coordinate of the particle is $\mathbf{1 6 ~ m}$, then the velocity of the particle is:
A) $(8 \mathrm{i}-7 \mathrm{j}) \mathrm{m} / \mathrm{s}$
B) $(8 i+7 j) \mathrm{m} / \mathrm{s}$
C) $(7 \mathrm{i}-8 \mathrm{j}) \mathrm{m} / \mathrm{s}$
D) $(7 \mathrm{i}+8 \mathrm{j}) \mathrm{m} / \mathrm{s}$

As a projectile thrown upward moves in its parabolic path, its horizontal velocity component:
9
A) increase
B) decrease
C) increase and then decrease
D) remain constant

A man was trapped on the top of a burning building (building A in the Figure). To avoid death, he decided to run and jump horizontally to a safe building (building B). The safe building was $\mathbf{6 . 5} \mathbf{~ m}$ horizontally away and $\mathbf{3} \mathbf{~ m}$ lower. The minimum initial speed that allows the man to survive and reach the other building safely is:

A) $4.9 \mathrm{~m} / \mathrm{s}$
B) $7.1 \mathrm{~m} / \mathrm{s}$
C) $8.3 \mathrm{~m} / \mathrm{s}$
D) $9.2 \mathrm{~m} / \mathrm{s}$

A car moves with a constant acceleration of $0.4 \mathbf{~ m} / \mathbf{s}^{2}$ parallel to the roadway. The car passes over a rise in the roadway such that the top of the rise is shaped like a circle of radius $\mathbf{5 0 0} \mathbf{~ m}$. At the moment the car is at the top of the rise, its velocity vector is horizontal and has a magnitude of $6 \mathrm{~m} / \mathbf{s}$. The magnitude of the total
 acceleration for the car at this instant is:
A) $0.31 \mathrm{~m} / \mathrm{s}^{2}$
B) $0.41 \mathrm{~m} / \mathrm{s}^{2}$
C) $0.51 \mathrm{~m} / \mathrm{s}^{2}$
D) $0.22 \mathrm{~m} / \mathrm{s}^{2}$

The figure represents the total acceleration of a particle moving clockwise in a circle of radius $\mathbf{2 . 5} \mathbf{~ m}$ at a certain instant of time. At this instant, the speed of the particle is:

A) $2.1 \mathrm{~m} / \mathrm{s}$
B) $7.4 \mathrm{~m} / \mathrm{s}$
C) $4.3 \mathrm{~m} / \mathrm{s}$
D) $5.7 \mathrm{~m} / \mathrm{s}$

If the tension, $\mathbf{T}$, is $\mathbf{1 5} \mathbf{N}$ and the magnitude of the acceleration, $\mathbf{a}$, is $\mathbf{3} \mathbf{~ m} / \mathbf{s}^{\mathbf{2}}$, what is the mass, $\mathbf{m}$, of the suspended object? (Assume that all surfaces and the pulley are frictionless)

13

A) 1.3 kg
B) 1.8 kg
C) 2.2 kg
D) 3.4 kg

At an instant when a $\mathbf{4} \mathbf{~ k g}$ object has an acceleration equal to $(\mathbf{5 i}+\mathbf{3 j}) \mathbf{~ m} / \mathbf{s}^{\mathbf{2}}$, one of the two forces acting on the object is known to be $(\mathbf{1 2 i} \mathbf{+ 2 2} \mathbf{j}) \mathbf{N}$. The magnitude of the other force acting on the
14 object is:
A) $(10 \mathbf{i}-8 \mathbf{j}) \mathrm{N}$
B) $(8 \mathbf{i}-12 \mathbf{j}) \mathrm{N}$
C) $(6 \mathbf{i}+9 \mathbf{j}) \mathrm{N}$
D) $(8 \mathbf{i}-10 \mathbf{j}) \mathrm{N}$

The apparent weight of a fish in an elevator is greatest when the elevator:
15
A) accelerates upward
B) moves upward at constant velocity
C) moves downward at constant velocity
D) accelerates downward

A 5 kg box is pulled by $\mathrm{F}=14 \mathrm{~N}$ with angle $35^{\circ}$ on a rough horizontal surface with constant speed as shown in the Figure. The coefficient of kinetic friction between the box and the surface is:

A) 0.44
B) 0.33
C) 0.38
D) 0.28

A $\mathbf{4} \mathbf{~ k g}$ block slides down a $53^{\circ}$ incline with acceleration $\frac{\boldsymbol{g}}{2}$. What is the kinetic friction force on 17 the block? (where $\boldsymbol{g}=9.8 \mathrm{~m} / \mathrm{s}$ )?
A) 4 N
B) 43.2 N
C) 11.7 N
D) 50.9 N

On a frictionless banked curved road, which has a radius of $\mathbf{1 0 0} \mathbf{m}$ and a banking angle of $\mathbf{1 7}^{\circ}$. The
18 maximum possible speed without slipping (بون انز لاق) for a car moving on it is:
A) $58.5 \mathrm{~m} / \mathrm{s}$
B) $17.3 \mathrm{~m} / \mathrm{s}$
C) $16.9 \mathrm{~m} / \mathrm{s}$
D) $30.6 \mathrm{~m} / \mathrm{s}$

Consider the conical pendulum as shown in the Figure. If the speed of the circular motion of the mass $\mathbf{m}$ is $\mathbf{0 . 5} \mathbf{~ m} / \mathbf{s}$ and $\boldsymbol{\theta}=\mathbf{2 5}^{\boldsymbol{\circ}}$, the radius $\mathbf{r}$ is:

A) 0.055 m
B) 0.028 m
C) 0.08 m
D) 0.11 m

An object moves around a circle. If the radius is doubled keeping the speed the same, then the magnitude of the centripetal force must be:
20
A) twice as great
B) half as great
C) four times as great
D) one-fourth as great

## The End
