* Mobile Telephones are not allowed in the classrooms
- Time allowed is 2 hours
- Attempt all questions
* Choose the nearest number to your answer
* For each question, put the code of the correct answer in the following table beneath the question number:

| $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |

| 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |

| 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |

| (1) |
| :--- |
| Two engines operate independently, if the probability that an engine will start <br> is 0.4 , and the probability that other engine will start is 0.6 , then the probability <br> that both will start is: | (A) $_{1}^{1} \quad |$|  |
| :--- | :--- | :--- | :--- | :--- |

| (2) | If $P(B)=0.3$ and $P(A \mid B)=0.4$, then $P(A \cap B)$ equal to; |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | (A) | 0.67 | (B) | $\underline{0.12}$ | (C) | 0.75 | (D) | 0.3 |

| (3) | The probability that a computer system has an electrical failure is 0.15 , and the <br> probability that it has a virus is 0.25, and the probability that it has both <br> problems is 0.20, then the probability that the computer system has the <br> electrical failure or the virus is: |  |
| :--- | :--- | :--- |
|  | (A) 1.15 | (B) $\underline{0.2}$ |

Two brothers, Ahmad and Mohammad, are the owners and operators of a small restaurant. Ahmad and Mohammad alternate between the jobs of cooking and dish washing, so that at any time, the probability that Ahmad is washing the dishes is 0.50 , and Mohammad is also 0.5 . The probability that Mohammad breaks a dish is 0.40 . On the other hand, the probability that Ahmad breaks a dish is only 0.10 . Then,
(4) the probability that a dish will be broken is:

|   (A) 0.667 (B) $\underline{0.25}$ (C) 0.8 (D) <br> 0.5         <br> (5) If there is a broken dish in the kitchen of the restaurant. The probability that it <br> was washed by Mohammad is:        |
| :--- |

| (6) | From a box containing 4 black balls and 2 green balls, 3 balls are drawn in <br> succession, each ball being replaced in the box before the next draw is made. <br> The probability of drawing 2 green balls and 1 black ball is: |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | (A) | $\underline{6 / 27}$ | (B) | $2 / 27$ | (C) | $12 / 27$ |

| (7) | The value of k , that makes the function |  |  |
| :--- | :--- | :--- | :--- |
|  | $f(x)=k\binom{2}{x}\binom{3}{3-x}$ For $\mathrm{x}=0,1,2$ |  |  |
| serve as a probability distribution of the discrete random variable X ; |  |  |  |
|  | (A) $\underline{1 / 10}$ | (B) | $1 / 9$ |
| (C) | 1 | (D) | $1 / 7$ |

The cumulative distribution of a discrete random variable, X , is given below:

$$
F(x)= \begin{cases}0 & \text { for } x<0 \\ 1 / 16 & \text { for } 0 \leq x<1 \\ 5 / 16 & \text { for } 1 \leq x<2 \\ 11 / 16 & \text { for } 2 \leq x<3 \\ 15 / 16 & \text { for } 3 \leq x<4 \\ 1 & \text { for } x \geq 4 .\end{cases}
$$

| (8) | the $P(X=2)$ is equal to: |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (A) | 3/8 | (B) | 11/16 | (C) | 10/16 | (D) | 5/16 |
| (9) | the $P(2 \leq X<4)$ is equal to: |  |  |  |  |  |  |  |
|  | (A) | 20/16 | (B) | 11/16 | (C) | 10/16 | (D) | 5/16 |

(10) | The proportion of people who respond to a certain mail-order is a continuous |
| :--- |
| random variable $X$ that has the density function |
| $f(x)= \begin{cases}\frac{2(x+2)}{5}, & 0<x<1, \\ 0, & \text { elsewhere. }\end{cases}$ |
| Then, the probability that more than $1 / 4$ but less than $1 / 2$ of the people contacted |
| will respond to the mail-order is: |

| (A) $\underline{19 / 80}$ | (B) $1 / 2$ | (C) $1 / 4$ | (D) $81 / 400$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Suppose the failure time (in hours) of a specific type of electrical device is distributed with a probability density function:

$$
f(x)=\frac{1}{50} x \quad, 0<x<10
$$

then,
(11) the average failure time of such device is:

|  | (A) | $\underline{6.667}$ | (B) | 1.00 | (C) | 2.00 | (D) | 5.00 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(12) the variance of the failure time of such device is:

|  | (A) | 0 | (B) | 50 | (C) | $\underline{5.55}$ | (D) | 10 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

A random variable X has a mean of 10 and a variance of 4 , then, the random variable $\mathrm{Y}=2 \mathrm{X}-2$,

| (13) | has a mean of: |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (A) | 10 | (B) | $\underline{18}$ | (C) | 20 | (D) | 22 |
| (14) and a standard deviation of: |  |  |  |  |  |  |  |  |
|  | (A) | 6 | (B) | 2 | (C) | 4 | (D) | 16 |

(15) \begin{tabular}{l}
The probability distribution of X , the number of typing errors committed by a \\
typist is: \\

$\qquad$| $x$ | 0 | 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{f}(x)$ | 0.41 | 0.37 | 0.16 | 0.05 | 0.01 | \\

Then the average number of errors for this typist is: \\
\hline

 

\\
\hline
\end{tabular}

If the random variable X has an exponential distribution with the mean 4, then

| (16) | $P(X<8)$ equals to: |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (A) | 0.2647 | (B) | 0.4647 | (C) | $\underline{0.8647}$ | (D) | 0.6647 |
| (17) the variance of X is: | the variance of X is: |  |  |  |  |  |  |  |
|  | (A) | 4 | (B) | $\underline{16}$ | (C) | 2 | (D) | 1/4 |

If the random variable X has a normal distribution with the mean 10 and the variance 36, then

| (18) | the value of X above which an area of 0.2296 lie is: |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (A) | 14.44 | (B) | 16.44 | (C) | 10.44 | (D) | 18.44 |
| (19) | the probability that the value of X is greater than 16 is: |  |  |  |  |  |  |  |

|  | (A) | 0.9587 | (B) | $\underline{0.1587}$ | (C) | 0.7587 | (D) | 0.0587 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## $1>$

| (20) | Suppose that the marks of the students in a certain course are distributed <br> according to a normal distribution with the mean 65 and the variance 16. A <br> student fails the exam if he obtains a mark less than 60. Then the percentage of <br> students who fail the exam is: |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  | (A) $20.56 \%$ | (B) | $90.56 \%$ | (C) |
| $50.56 \%$ | (D) | $\underline{10.56 \%}$ |  |  |

In a certain industrial facility accidents occur infrequently. If the probability of an accident on a given day is p , and accidents are independent of each other. If $\mathbf{p}=\mathbf{0 . 2}$, then

| (21) | probability that within seven days there will be at most two accidents will occur is: |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (A) | $\underline{0.7865}$ | (B) | 0.4233 | (C) | 0.5767 | (D) | 0.6647 |
| (22) | probability that within seven days there will be at least three accidents will occur is: |  |  |  |  |  |  |  |
|  | (A) | 0.7865 | (B) | 0.2135 | (C) | 0.5767 | (D) | 0.1039 |
| the expected number of accidents to occur within this week is: |  |  |  |  |  |  |  |  |
|  | (A) | 1.4 | (B) | 0.2135 | (C) | 2.57 | (D) | 0.59 |

The number of traffic accidents per week in a small city has a Poisson distribution with mean equal to 1.3. Then,

| (24) | the probability of at least two accidents in 2 weeks is: |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :---: |
|  |  |  |  |  |  |  |  | (A) |  |
| 0.2510 | (B) | 0.3732 | (C) | 0.5184 | (D) | $\underline{0.7326}$ |  |  |  |
| (25) | the standar diviation of traffic accidents per week in the small city is: |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |

A study was made by a taxi company to decide whether the use of new tires (A) instead of the present tires (B) improves fuel economy. Six cars were equipped with tires (A) and driven over a prescribed test course. Without changing drivers and cares, test course was made with tires (B). The gasoline consumption, in kilometers per liter ( $\mathrm{km} / \mathrm{L}$ ), was
recorded as follows: (assume the population to be normally distributed with unknown variances and are equals)

| Car | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Type (A) | 4.5 | 4.8 | 6.6 | 7.0 | 6.7 | 4.6 |
| Type (B) | 3.9 | 4.9 | 6.2 | 6.5 | 6.8 | 4.1 |

(26) A 95\% confidence interval for the true mean gasoline brand A consumption is:

| (A) | $4.462 \leq \mu_{A} \leq 6.938$ | (B) | $2.642 \leq \mu_{A} \leq 4.930$ |
| :--- | :--- | :--- | :--- |
| (C) | $5.2 \leq \mu_{A} \leq 9.7$ | (D) | $6.154 \leq \mu_{A} \leq 6.938$ |

(27) A $99 \%$ confidence interval for the difference between the true mean of type (A) and type $(B)\left(\mu_{\mathbf{A}}-\mu_{\mathbf{B}}\right)$ is:

|  | (A) | $-1.939 \leq \mu_{A}-\mu_{B} \leq 2.539$ | (B) | $-2.939 \leq \mu_{A}-\mu_{B} \leq 1.539$ |
| :--- | :--- | :--- | :--- | :--- |
|  | (C) | $0.939 \leq \mu_{A}-\mu_{B} \leq 1.539$ | (D) | $-1.939 \leq \mu_{A}-\mu_{B} \leq 0.539$ |

A food company distributes two brands of milk. If it is found that 80 of 200 consumers prefer brand A and that 90 of 300 consumers prefer brand B,

| (28) | $96 \%$ confidence interval for the true proportion of brand (A) is: |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (A) | 0.328 | $\leq 0.3$ |  | (B) | $0.228 \leq p_{A} \leq 0.675$ |
|  | (C) | 0.328 | $\leq 0.4$ |  | (D) | $0.518 \leq p_{A} \leq 0.875$ |
| (29) | A $99 \%$ confidence interval for the true difference in the proportion of brand (A) and (b), is: |  |  |  |  |  |
|  | (A) | $0.0123 \leq p_{A}-p_{B} \leq 0.212$ |  |  | (B) | $-0.2313 \leq p_{A}-p_{B} \leq 0.3612$ |
|  | (C) | $-0.0023 \leq p_{A}-p_{B} \leq 0.012$ |  |  | (D) | $-0.0123 \leq p_{A}-p_{B} \leq 0.212$ |
| (30) | If the value of $\alpha$ decrease (get smaller), then the interval estimate will decrease (get smaller); |  |  |  |  |  |
|  | (A) | Yes | (B) | No | (C) | No change |
