Answer the following questions:

1. Order the printing process steps for printing a word document called "*Print Job20.docx*" in the shared printer:

Order	Printing Process
	The print provider works with the print processor to ensure that the print file " <i>Print Job20.docx</i> " is formatted.
	The print monitor takes the file " <i>Print Job20.docx</i> " from the spool memory
	Send the print file " <i>Print Job20.docx</i> " to the print provider for spooling.
	Send the print file " <i>Print Job20.docx</i> " to the router
	Create " <i>Print Job20.docx</i> " File
	Contact Windows Graphics device Interface (GDI) to gather format information of the print job.
	Send the " <i>Print Job20.docx</i> " document to the Server Service in the Print Server.

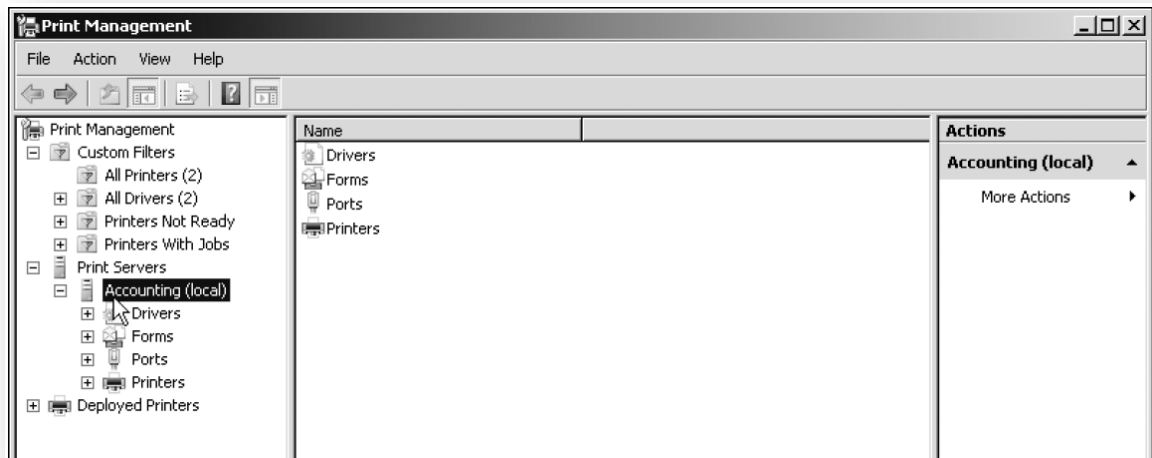

2. The management group in a publishing company has decided to centralize coordination of five new printers in the two computer support staff office. The computer support staff wants to turn one of the Windows Server 2008 servers, which are located in their office, into a print server to manage the five new printers. The computer support staff wants to give different printing permissions to the different management areas in the company. Can you help them in assigning the printing permissions by choosing the most appropriate one:

- (a) For the Head office, they want to allow them to print from any printer and to have complete access to manage the printers (**Print – Manage Documents – Manage Printers**)
- (b) For the human resources section, they want to allow them to manage only their own printing jobs (**Print – Manage Documents – Manage Printers**)
- (c) For the help desk computer technicians, they want to allow them to change the printers' permissions (**Print – Manage Documents – Manage Printers**)
- (d) For the secretary office, they want to allow them to control any printing jobs in the printers (**Print – Manage Documents – Manage Printers**)
