TRIPLE INTEGRAL

$$\iiint\limits_{R} f(x, y, z) \ dV = \lim_{l, m, n \to \infty} \sum_{i=1}^{l} \sum_{j=1}^{m} \sum_{k=1}^{n} f(x_{ijk}^{*}, y_{ijk}^{*}, z_{ijk}^{*}) \Delta V$$

$$\iiint\limits_{D} f(x, y, z) \ dV = \int_{r}^{s} \int_{c}^{d} \int_{a}^{b} f(x, y, z) \ dx \ dy \ dz$$

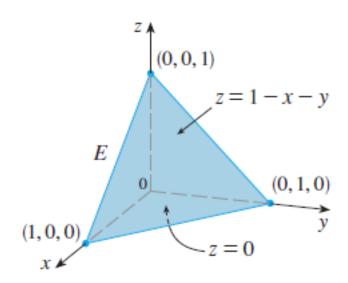

EXAMPLE 1 Evaluate the triple integral $\iiint_B xyz^2 dV$, where B is the rectangular box given by

$$B = \{(x, y, z) \mid 0 \le x \le 1, -1 \le y \le 2, 0 \le z \le 3\}$$

SOLUTION We could use any of the six possible orders of integration. If we choose t integrate with respect to x, then y, and then z, we obtain

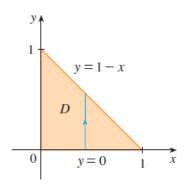

$$\iiint_{B} xyz^{2} dV = \int_{0}^{3} \int_{-1}^{2} \int_{0}^{1} xyz^{2} dx dy dz = \int_{0}^{3} \int_{-1}^{2} \left[\frac{x^{2}yz^{2}}{2} \right]_{x=0}^{x=1} dy dz$$
$$= \int_{0}^{3} \int_{-1}^{2} \frac{yz^{2}}{2} dy dz = \int_{0}^{3} \left[\frac{y^{2}z^{2}}{4} \right]_{y=-1}^{y=2} dz$$
$$= \int_{0}^{3} \frac{3z^{2}}{4} dz = \frac{z^{3}}{4} \int_{0}^{3} = \frac{27}{4}$$

EXAMPLE 2 Evaluate $\iiint_E z \ dV$, where E is the solid tetrahedron bounded by the four planes x = 0, y = 0, z = 0, and x + y + z = 1.

SOLUTION

$$E = \{(x, y, z) \mid 0 \le x \le 1, \ 0 \le y \le 1 - x, \ 0 \le z \le 1 - x - y\}$$

$$\iiint_E z \ dV = \int_0^1 \int_0^{1-x} \int_0^{1-x-y} z \ dz \ dy \ dx = \int_0^1 \int_0^{1-x} \left[\frac{z^2}{2} \right]_{z=0}^{z=1-x-y} dy \ dx$$

$$= \frac{1}{2} \int_0^1 \int_0^{1-x} (1-x-y)^2 \, dy \, dx = \frac{1}{2} \int_0^1 \left[-\frac{(1-x-y)^3}{3} \right]_{y=0}^{y=1-x} dx$$

$$= \frac{1}{6} \int_0^1 (1-x)^3 dx = \frac{1}{6} \left[-\frac{(1-x)^4}{4} \right]_0^1 = \frac{1}{24}$$

EXAMPLE 3 Evaluate $\iiint_E \sqrt{x^2 + z^2} \ dV$, where E is the region bounded by the paraboloid $y = x^2 + z^2$ and the plane y = 4.

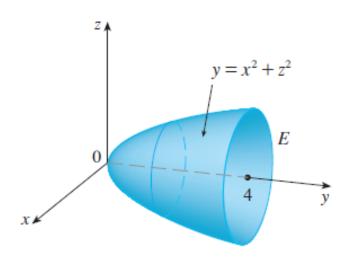

FIGURE 9
Region of integration

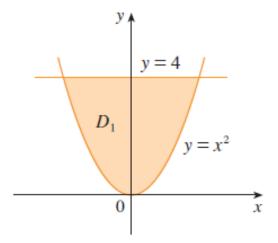

FIGURE 10
Projection onto xy-plane

SOLUTION

From $y = x^2 + z^2$ we obtain $z = \pm \sqrt{y - x^2}$, so the lower boundary surface of E is $z = -\sqrt{y - x^2}$ and the upper surface is $z = \sqrt{y - x^2}$. Therefore the description of E as a type 1 region is

$$E = \{(x, y, z) \mid -2 \le x \le 2, \ x^2 \le y \le 4, \ -\sqrt{y - x^2} \le z \le \sqrt{y - x^2}\}$$

and so we obtain

$$\iiint\limits_{E} \sqrt{x^2 + z^2} \ dV = \int_{-2}^{2} \int_{x^2}^{4} \int_{-\sqrt{y-x^2}}^{\sqrt{y-x^2}} \sqrt{x^2 + z^2} \ dz \ dy \ dx$$

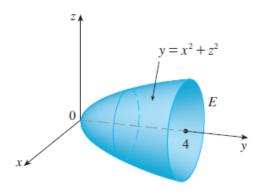

FIGURE 9
Region of integration

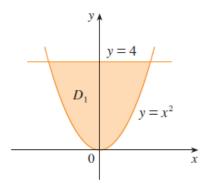

FIGURE 10
Projection onto xy-plane

Although this expression is correct, it is extremely difficult to evaluate. So let's instead consider E as a type 3 region. As such, its projection D_3 onto the xz-plane is the disk $x^2 + z^2 \le 4$ shown in Figure 11.

Then the left boundary of E is the paraboloid $y = x^2 + z^2$ and the right boundary is the plane y = 4, so taking $u_1(x, z) = x^2 + z^2$ and $u_2(x, z) = 4$ in Equation 11, we have

$$\iiint\limits_E \sqrt{x^2 + z^2} \ dV = \iint\limits_{D_3} \left[\int_{x^2 + z^2}^4 \sqrt{x^2 + z^2} \ dy \right] dA = \iint\limits_{D_3} (4 - x^2 - z^2) \sqrt{x^2 + z^2} \ dA$$

Although this integral could be written as

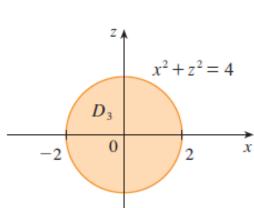

$$\int_{-2}^{2} \int_{-\sqrt{4-x^2}}^{\sqrt{4-x^2}} (4-x^2-z^2) \sqrt{x^2+z^2} \, dz \, dx$$

it's easier to convert to polar coordinates in the xz-plane: $x = r \cos \theta$, $z = r \sin \theta$. This gives

$$\iiint_{E} \sqrt{x^{2} + z^{2}} \, dV = \iint_{D_{3}} (4 - x^{2} - z^{2}) \sqrt{x^{2} + z^{2}} \, dA$$

$$= \int_{0}^{2\pi} \int_{0}^{2} (4 - r^{2}) r \, r \, dr \, d\theta = \int_{0}^{2\pi} d\theta \int_{0}^{2} (4r^{2} - r^{4}) \, dr$$

$$= 2\pi \left[\frac{4r^{3}}{3} - \frac{r^{5}}{5} \right]_{0}^{2} = \frac{128\pi}{15}$$

EXAMPLE 4:

Evaluate
$$\iiint_Q 3xy^3 z^2 dV$$
 if
$$Q = \{(x, y, z): -1 \le x \le 3, 1 \le y \le 4, 0 \le z \le 2\}.$$

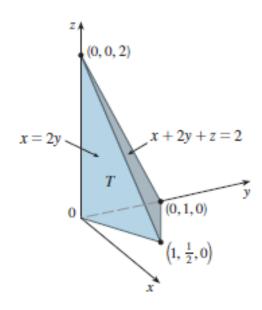

Solution Of the six possible iterated integrals, we shall use the following:

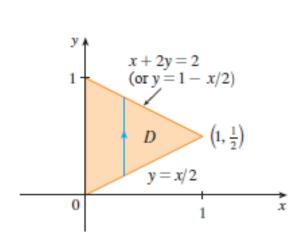

$$\int_{1}^{4} \int_{-1}^{3} \int_{0}^{2} 3xy^{3} z^{2} dz dx dy = \int_{1}^{4} \int_{-1}^{3} xy^{3} z^{3} \Big]_{0}^{2} dx dy$$

$$= \int_{1}^{4} \int_{-1}^{3} 8xy^{3} dx dy = \int_{1}^{4} 4x^{2} y^{3} \Big]_{-1}^{3} dy$$

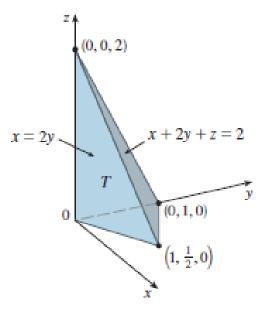

$$= \int_{1}^{4} (36y^{3} - 4y^{3}) dy = 8y^{4} \Big]_{1}^{4} = 2040.$$

EXAMPLE 5 Use a triple integral to find the volume of the tetrahedron T bounded by the planes x + 2y + z = 2, x = 2y, x = 0, and z = 0.

SOLUTION The tetrahedron T and its projection D onto the xy-plane are shown in Figures 14 and 15. The lower boundary of T is the plane z = 0 and the upper boundary is the plane x + 2y + z = 2, that is, z = 2 - x - 2y.

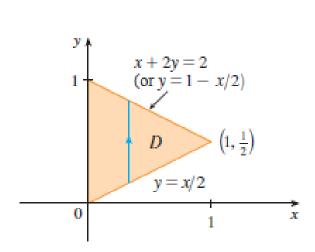

FIGURE 14

FIGURE 15

Therefore we have

$$V(T) = \iiint_{T} dV = \int_{0}^{1} \int_{x/2}^{1-x/2} \int_{0}^{2-x-2y} dz \, dy \, dx$$
$$= \int_{0}^{1} \int_{x/2}^{1-x/2} (2 - x - 2y) \, dy \, dx = \frac{1}{3}$$
