Digital Age and Education

Dr. Hatim A. Aboulsamh

Dr. Salah M. Rahal

Summary

The digital technology has been led to incredible progresses in different fields and the actual era can be described as a digital age.

As mentioned in the first part of this article, the education in this age will be based on the electronic school, where the new technology of computers, related devices, and networks; especially the Internet will be common tools. With this technology the learning process will be fundamentally transformed.

In the second part, the trends, initiatives, and decisions related to the e-learning / tomorrow's education in European Union Countries are highlighted.

In the third part, the education in Kingdom of Saudi Arabia schools is briefly viewed. Finally some useful points - conclusion are given.
