Introduction

At the first we would like to explain some essential Purposes and goals of the content of special English for Education Course. It aims to gain some specific knowledge, examine the topics we have selected for our students, gain some examples of texts; our students can read and comprehend, and plan further opportunities to develop students' reading for topics and terms in education. So the Staff members of education faculty put these topics and terms taking in regards the main learning outcomes for students enrolled in the course which are as follows:

- The student must learn the terms that used in education.
- The student must learn the terms that used in the various subjects (fields) of the College:.
- The student must learn the terms that used in educational article in English languish.
- The student must learn topics in the various educational departments in the college.

Committee members

TOPIC (1)

INDIVIDUAL DIFFERENCES

It is often said that no two individuals are exact duplicates; they differ from each other in some way or the other. Hence the job of the psychologist is to identify and understand this uniqueness in individuals. Such a similarity or difference between persons reveals individual differences. It happens in our day-to-day life when we see people around us. A question comes to mind; how and why people appear similar or different to each other? For example when we think about their physical appearance, we often ask ourselves why some people have dark or fair complexion, why some people are tall and some are short, why some are thin and why some are very fat. When we think about their psychological characteristics we often come across people who are very talkative or less talkative, some laugh too much whereas others take much time even to smile, some are very friendly whereas some prefer to be alone. The present lesson tries to answer all such queries which can bother us in our everyday life. In psychology, these are called individual differences referring to the extent and kind of variations or similarities among people on some of the important psychological aspects such as intelligence, personality, interest, and aptitude.

NATURE OF INDIVIDUAL DIFFERENCES

Individual differences occur due to interaction of genetic and environmental factors. We inherit certain characteristics from our parents through genetic codes. The phenotype or the expressed forms of our characteristics depend on contributions of the socio-cultural environment. This is the reason why we are not exactly like our parents and our parents not exactly like our grandparents. We do share similarities with our parents in respect of many physical attributes like height, colour of eyes,

shape of nose etc. We also inherit certain cognitive, emotional and other characteristics from our parents like intellectual competence, love for sport, creativity etc. However, our own characteristics develop largely by the support from the environment which we inhabit.

The environment is responsible as how we are reared, the kind of atmosphere at house, whether it is liberal or strict, the type of education that we get, what we learn from people, around us, books, cultural practices, peers, teachers and media All these aspects refer to 'environment' which help in developing our potentials. Environment, by providing models and other opportunities, helps us develop many traits and skills. Our inheritance alone cannot decide what we become but our environment also contributes.

ASSESSING INDIVIDUAL DIFFERENCES:

Psychologists have developed 'tests' to assess these characteristics. A psychological test is a structured technique used to generate a carefully selected sample of behavior.

In order to be useful for the purpose of drawing inferences about the person being tested, it is necessary that the test should be reliable, valid and standardized. A test is reliable if it measures a given characteristic consistently. For instance, if you assess something the scores on separate occasions should be more or less similar. Thus a person, if found to be of average intelligence on one occasion should also appear of average intelligence if tested after two weeks. If a test tells two different values while assessing the object on two occasions then it will be called unreliable. A test of intelligence can be called reliable only when a person scores high or low consistently on both the occasions. A good test is found to have high reliability.

The validity of a test refers to the degree to which it assesses what it intends to assess. A valid test of personality gives a measure of a person's personality and predicts behavior in situations where that aspect of personality is pertinent.

Psychologists have developed tests to measure different human characteristics. In schools, we use achievement tests which measure what people have learnt. Psychologists frequently use tests of ability and personality. The tests of ability tell what an individual can do when he or she is at his/her best. Ability tests measure capacity as potential rather than achievement. Tests of intelligence and aptitude come under this category. Aptitude refers to the ability to learn a particular kind of skill required in a specific situation. Personality tests measure the characteristic ways of thinking, feeling or behaving.

Key words:

- Individual differences.
- Foundations.
- Psychology.

3- Maltby, J. Day, L. & Macaskill, A. (2007). Personality, Individual Differences and Intelligence. London: Pearson Education. <u>http://www.pearsoned.co.uk/Bookshop/detail.asp?item=10000000009081</u> <u>6</u>

Exercises:

(I)- Read the passage then choose the correct answer of the following questions:

- (1) Individual differences equal in meaning :
- (A) Happiness in individuals
- (B) Uniqueness in individuals
- (C) Smiling in individuals
- (D) Intelligence in individuals

(2) Which thing does reveal individual differences?:

- (A) Similarity
- (B) Differences
- (C) Similarity and differences
- (D) Nothing of all

(3) Individual differences occur due to interaction between:

- (A) genetic factors
- (B) environmental factors
- (C) genetic and environmental factors
- (D) Nothing of all
- (4) One of these aspects refer to environmental factor which helps in developing our potentials:
- (A) Colour of eyes
- (B) Height
- (C) Colour of eyes and height
- (D) The type of education
- (5) A test is if it measures a given characteristic consistently:
- (A) Reliable
- (B) Valid
- (C) Standardized
- (D) All of them

- (6) Theof a test refers to the degree to which it assesses what it intends to assess:
- (A) Reliability
- (B) Validity
- (C) Standardized
- (D) All of them
- (7) In schools, we use which measure what people have learnt:
- (A) Tests of aptitude
- (B) Tests of ability
- (C) Tests of personality
- (D) Achievement tests
- (8) We inherit certain cognitive, emotional and other characteristics from our parents like:
- (A) intellectual competence
- (B) love for sport
- (C) Creativity
- (D) All of them
- (9) We inherit certain characteristics from our parents through genetic codes such as:
- (A) colour of eyes
- (B) The type of education
- (C) liberal or strict
- (D) All of them
- (10) Psychologists have developed '.....' to assess characteristics
- (A) Tests
- (B) Drawings
- (C) Intelligences
- (D) Behaviors

(II)- Mark the following statements as True or False:

- (1) It is often said that no two individuals are exact duplicates
- (2) *individual differences referring to similarities among people*

- *(3)* Individual differences occur due to interaction of genetic factors
- (4) The validity of a test refers to the degree to which it assesses what it intends to assess
- (5) Psychologists have developed tests to measure different human characteristics
- (6) If a test tells two high different values it will be called reliable
- (7) Aptitude refers to the ability to learn a particular kind of skill required in a specific situation
- (8) Personality tests measure the characteristic ways of thinking, feeling or behaving
- (9) Environmental factors are responsible about individual differences such as height
- (10) Genetic factors like cultural practices are responsible as how we are reared

TOPIC (2)

NATURE OF INTELLIGENCE AND ITS ASSESSMENT

You often come across the term intelligence in everyday life. We generally use this term whenever we find somebody doing something very good which goes beyond our expectation. Intelligence is one of the psychological terms used quite frequently in various settings (e.g. school). Who can be called 'Intelligent'? The one who gets highest marks in exams? That person who earns many educational degrees? Is the doctor more intelligent, or the engineer or the lawyer or the artist? One may answer these questions in different ways depending on the meaning of intelligence. Intelligence is much more than getting degrees. Intelligence refers to 'multifaceted abilities of people''. It gets expressed in many ways. It comes in many forms. Some people are good in studies, some are good in repairing machines, some are good in acting and some are great in sports. People are very good in one subject and average in some other. The most important thing is that 'intelligence' is 'functional'. It is 'used' to do something and to achieve something.

In psychology, the term intelligence has been defined in many ways. One of the earliest definitions of intelligence was given by Binet and Simon in 1905 who defined it as the "ability to judge well, to understand well, and to reason well". One of the most popular definitions of intelligence was given by Wechsler who defined it as "the aggregate or global capacity of the individual to act purposefully, to think rationally, and to deal effectively with the environment".

Gardner defined intelligence as "the ability or skill to solve problems or to fashion products which are valued within one or more cultural settings". He used the term 'Multiple Intelligences' and advocated that there are eight types of intelligences such as Linguistic, Logical mathematical, Spatial, Musical, Bodily-kinesthetic, Interpersonal, Intrapersonal, and Naturalistic.

Though the first attempt to measure intelligence was made by Sir Francis Galton a more systematic approach was developed by Alfred Binet, a French Psychologist. In 1905, Binet gave the concept of Mental Age (MA) which refers to an individual's level of mental development relative to the environment in which he/she lives. The term Intelligence Quotient (IQ) was first devised by William Stern, a German psychologist, in 1912. IQ is defined as mental age divided by chronological age, and multiplied by 100: ($IQ = MA/CA \times 100$). For example if the mental of a child is 12and his/her Chronological age is 8 then the IQ of the child would be 150. The intelligence test developed by Binet was revised subsequently and in 1916 the test was given the name of Stanford - Binet test of intelligence. One of the most popular and widely used tests of intelligence is Wechsler Scales of Intelligence. These scales have been designed for individuals of different age groups such as Wechsler Adult Intelligence Scale (WAIS) for adults and Wechsler Intelligence Scale for Children (WISC) for children between the age of 6 and 16 years.

Intelligence tests are of two kinds Individual test and Group test. An individual test of intelligence can be administered to a single individual at a given time whereas a group test is administered to more than one individual at a time. On the basis of nature of items, intelligence tests are Verbal, Non-verbal, and Performance Tests. A verbal test requires understanding of written words. Hence it can be administered to literate individuals only. In non-verbal test, pictures or illustrations are used as item of the test. Performance tests are made up of certain concrete tasks. Both non-verbal and performance tests can be administered to literate and

illiterate individuals.

Key words:

- Intelligence.
- Assessment.
- Foundations.
- Psychology.
- Nature.

Exercises:

(I)- Read the passage then choose the correct answer of

the following questions:

- (1) The symbol (MA) means an individual level mental development, and it refers to :
- (A) chronological age
- (B) Memory age
- (C) Mental age
- (D) Intelligence age

(2) Individual tests of intelligence can be administered to:

- (A) Two individuals
- (B) Single individual
- (C) More than one
- (D) Group

(3) Both non-verbal and performance tests can be administered to :

- (A) Literate individuals only
- (B) Illiterate individuals only
- (C) Literate and illiterate individuals
- (D) Nothing of all

(4) The more specific meaning for intelligence refers to :

- (A) The one who gets highest marks in exams
- (B) The person who earns many educational degrees
- (C) Multifaceted abilities of people
- (D) Nothing of all

(5) The earliest definitions of intelligence was given by in 1905:

- (A) Binet
- (B) Simon
- (C) Binet and Simon
- (D) Wechsler

(6) The first attempt to measure intelligence was made by

- ······
- (A) Alfred Binet
- (B) Simon
- (C) Wechseler
- (D) Sir Francis Galton

(7) A verbal test of intelligence tests can be administered to :

- (A) Literate individuals only
- (B) Illiterate individuals only
- (C) Literate and illiterate individuals
- (D) Nothing of all
- (8) If the mental of a child is 12 and his/her Chronological age is 8 then the IQ of the child would be:
- (A) 150
- (B) 160
- (C) 130
- (D) 140
- (9) The definitions of intelligence was given by Who defined it as " the ability or skill to solve problems or to fashion products which are valued within one or more cultural settings":
- (A) Binet
- (B) Simon
- (C) Grdner
- (D) Wechsler

(II)- Mark the following statements as True or False:

- (1) Intelligence is one of the psychological terms used quite frequently in various settings
- (2) Intelligence tests are of two kinds Individual test and Group test
- (3) An individual test of intelligence can be administered to a group persons
- (4) A verbal test of intelligence tests can be administered to Illiterate individuals
- (5) Both non- verbal and performance tests of intelligence tests can be administered to Literate and illiterate individuals
- (6) The first attempt to measure intelligence was made by Alfred Binet

TOPIC(3)

In the classroom

The teacher's primary concern in preparing the lesson and in carrying out class activities is to maximize the amount of learning that take place, to involve the greatest number of students, and to reduce the amount of time devoted to matters not directly related to the business of acquiring language competence.

1- lesson planning.

Careful planning is essential to successful teaching. The teacher must determine the educational aims of the lesson and then select activities that will contribute to the realization of those aims. These activities will vary from class to class according to the needs and abilities of the students concerned.

a- Setting course goals.

Before determining lesson plans and lesson objectives, the teacher must establish a clear view of the goals of the course. These goals may be expressed in terms of percentages

b- Setting lesson objectives

Lesson objectives should be stated in terms of students behavior, that is, in terms of what the student will be able to do as a result of instruction. It is for the student, after all, that the teacher has been hired and the basic program selected. It may be the teacher's aim to cover a particular unit by a given data, but the lesson objectives must specify the end result in student behavior: for example, at the end of the lesson student will (should) be able to answer yes /no questions.

c- Planning lesson activities.

Once the objectives have been determined, the teacher selects appropriate lesson activities in order to attain these aims.

The general natural of the activities will be determined by the objectives themselves. If the students are expected to hear the differences between subjunctive and indicative forms of verbs, for instance, the teacher must provide various types of listening practice

The specific natural of the activities will correspond to the needs of the students and be determined by their age, their background, their interests, and their abilities.

D- Modifying the lesson plan in the classroom

It is sometimes necessary to abridge the lesson plan in the course of the lesson. Sometime an activities takes longer than anticipated, or perhaps a fire drill cuts into the available class time.

Key words

- classroom
- lesson
- The teacher's primary
- Activities
- Learning
- Students
- lesson planning
- teaching
- the educational aims
- behavior
- plan
- lesson objectives
- abilities

Exercises:

- Write true or false

a) The teacher's primary concern in preparing the lesson. () b) Careful planning is not essential to successful teaching. ()

c) The teacher must determine the educational aims of the

lesson. ()

d) Activities will vary from class to class according to the needs of the students. ()

e)The teacher must establish a clear view of the goals of the course. ()

f) Activities are not important in the class. ()

g) it is not necessary to determine lesson objectives.()

h) the teachers do the activities without share students with them. ()

TOPIC(4)

Individual and Group Instruction

Any classroom with movable furniture lends itself to a variety of instructional groupings ranging from the full class to individualized activities. Very large classes should frequently be broken down into small groups.

1- Whole- class instruction

In whole- class instruction the entire class is engaged in the same activity. Most frequently this activity is led by the teacher, who is giving instruction, modeling sentences, using the overhead, asking questions, leading drill, giving a talk on culture, and so on.

2- Half- class instruction

The class can be divided in half for debates and contests. Each group prepares for an activity that will later involve the other group. Unless the class is small, however, the halfclass group are often still too large to be assigned projects or conversation practice.

3-Interest group

Interest group are most effectively used with third and fourth level classes. Group may use foreign periodicals to research topics such as aviation, clothing, politics, or pollution, groups may also decide to write to foreign businesses for sample products, or to particular localities for travel brochures. Students dramatically inclined might like to prepare a short play. Another group might want to make a home movie with a foreign language sound track. One day a week or part of one day a week might be devoted to such interest-group activities.

4- Small conversation groups

There are several ways of forming the group. The teacher might appoint group leaders and give them lists of lead questions. More advanced classes might read the lesson and prepare questions they want to discuss. 5- Working in pairs6- Independent activities7- Mixed grouping

Key words:

- Individual
- Group
- Instruction
- Practice
- Pairs
- Independent

<u>Exercises</u>:

Write true or false
a) In whole- class instruction the entire class is engaged in the same activity. ()
b) Interest group are not effectively used with third and fourth level classes. ()
c) There are two ways of forming the group in the classroom. ()
d) there is one methods teaching to teach the student.()
e) Lecture methods is the best methods to teach the students.()

TOPIC (5)

What is A Computer?

What is a computer? A computer is an apparatus built to perform routine calculations with speed, reliability, and ease. There are three types of computer. The most popular ones are digital computer, which function internally, and perform operations exclusively with digital numbers. They receive new programs quite easily via manual instructions or, in modern versions, via automatic means.

The idea of making computers began a long time ago. Historically, the most important early computing instrument is the **ABACUS**, which has been known and widely used for more than 200 years. As years passed, computers, however, are made of electronic components, such as transistors or integrated circuits and can be used for a variety of purposes. Modern electronic computers are much faster and more accurate than earlier kinds of computers. Their most important characteristics, however, is that they can be programmed, that is, the instructions which tell the computer what to do can easily be changed. In this way, computers can do many different things. The instructions or programs which tell the computer what to do are called computer software. The electronic and mechanical parts which are controlled by the software are called computer hardware.

Today there are three basic kinds of computers: mainframe, minicomputers, and microcomputers. Mainframes are large expensive general purpose machines, which are used primarily by large businesses and government organizations. Minicomputers are smaller, less expensive machines, which are often used for specialized purposes in scientific and engineering laboratories. Microcomputers are small, often portable machines and are used in homes, small businesses, and the offices of large firms. Microcomputers were not developed until the early 1960s. in addition to being cheaper and smaller than mainframe computers, they also rugged and dependable. Originally, they were sold to scientists and engineers; in time, however, they began to be used in businesses as well.

The computer field is experiencing rapid growth and change which results from the decreasing cost of the basic components of computers. Computers are made of electronic circuits. When people talk about computers, they are often talking about hardware and software which is the instructions or programs. A program is a step by step series of commands or instructions which the system follows in handling or transforming data. Instructions to the computer must be very simple and clear. Making instructions simple, however, is not only the factor in taking to computers. The computer doesn't speak our language. There are many programming languages.

In 1956 the first widely used high-level programming language was introduced- called **FORTRAN** (from <u>For</u>mula and <u>Tran</u>slator). It was designed for dealing with complicated calculations of scientists and engineers. **COBOL** (from <u>Common B</u>usiness <u>O</u>riented <u>L</u>anguage) was introduced soon after and was designed to aid in business data processing. <u>BASIC</u> (from <u>B</u>eginner's <u>A</u>ll-Purpose <u>Symbolic I</u>nstruction <u>C</u>ode) was developed in 1960 to give computer novices a readily understandable programming tool.

All computer programs are divided into three basic operations or steps: the first step is called input. In this step information, which is usually called data, is put into computer. Next is the process step, in which the data is changed or transformed. Finally, there is the output step. The transformed data is returned to the user of the computer. Despite computers limitations, they are the most versatile machines ever created by human beings. This versatile makes computers more important and guarantees them an increasing place in our lives. In the past few years, computers have become much more common in homes, offices and factories. Video games are a special kind of computer.

Nowadays, we see major improvements in both hardware and software. These improvements allow computers to see, to speak, and understand speech, tasks which were difficult or impossible in the past. Further, We also have to develop new kinds of software, which can simulate the decision-making activities of human beings, that is artificial intelligence. These goals are so important that people throughout the world are working on them. We already have some programs, which simulate human intelligence, for example, chess playing programs, and expert programs, which diagnose disease-but we still, have a long way to go to achieve these goals.

<u>Exercises</u>:

Read the passage and answer the following questions:

- (1) What is a computer?
- (2) What is the function of digital computer?
- *(3) What is the modern computer made of?*
- (4) Mention the advantages of modern electronic computers?
- (5) *Define: software and hardware?*
- (6) What are the principal kinds of computers today?
- (7) Which fields are they used in?
- (8) Why is the computer field changing and growing rapidly?
- (9) What is a program?
- (10) What is the importance of a program to a computer?
- (11) Mention the different kinds of programming languages and what each one is designed for?
- (12) What are the three basic operations of a modern computer? Explain them.
- (13) What do we mean by artificial intelligence?
- (14) Mention some programs which simulate human intelligence?
- (15) What will future improvements in hardware and software do to computers?

Do as shown in brackets

- (16) we will have to learn new ways of arranging computer circuits so that ------ (complete)
- (17) Although computers are limited, they are the most versatile machines. (use: despite)
- (18) The idea of (make) computers (begin) a long ago. (correct)
- (19) The modern computers (make) up of electronic components. (correct)
- (20) Modern computers are much (fast) and are (accurate) than earlier kinds of computers (correct)

- (21) There are three main kinds of computers: -----, -----, -----, and ------. (complete)
- (22) The rapid growth and change of computers results from ------- (complete)
- (23) All computer programs are divided ----- three steps. (preposition)
- (24) In the future we will see major (improve) in both ------(correct and complete)
- (25) We already have some programs ------ simulate human intelligence. (Relative pronoun).

TOPIC(6)

COMPUTERS MAKE THE WORLD

SMALLER AND SMARTER

The ability of tiny computing devices to control complex operations has transformed the way many tasks are performed, ranging from scientific research to producing consumer products. Tiny 'computers on a chip' are used in medical equipment, home appliances, cars and toys. Workers use handheld computing devices to collect data at a customer site, to generate forms, to control inventory, and to serve as desktop organizers.

Not only is computing equipment getting smaller, it is getting more sophisticated. Computers are part of many machines and devices that once required continual human supervision and control. Today, computers in security systems result in safer environments, computers in cars improve energy efficiency, and computers in phones provide features such as call forwarding, call monitoring, and call answering.

These smart machines are designed to take over some of the basic tasks previously performed by people; by so doing, they make life a little easier and a little more pleasant. Smart cards store vital information such as health records, drivers' licenses, bank balances, and so on. Smart phones, cars, and appliances with built in computers can be programmed to better meet individual needs. A smart house has a builtin monitoring system that can turn lights on and off, open and close windows, operate the oven, and more.

With small computing devices available for 35 performing smart tasks like cooking dinner, programming the VCR, and controlling the flow of information in an organization, people are able to spend more time doing what they often do best - being creative. Computers can help people work more creatively.

Multimedia systems are known for their educational and entertainment value, which we call 'edutainment'. Multimedia combines text with sound, video, animation, and graphics, which greatly enhances the interaction between user and machine and can make information more interesting and appealing to people. Expert systems software enables computers to 'think' like experts. Medical diagnosis expert systems, for example, can help doctors pinpoint a patient's illness, suggest further tests, and prescribe appropriate drugs.

Connectivity enables computers and software that might otherwise be incompatible to communicate and to share resources. Now that computers are proliferating in many areas and networks are available for people to access data and communicate with others, personal computers are becoming interpersonal PCs. They have the potential to significantly improve the way we relate to each other. Many people today telecommute -that is, use their computers to stay in touch as with the office while they are working at home. With the proper tools, hospital staff can get a diagnosis from a medical expert hundreds or thousands of miles away. Similarly, the disabled can communicate more effectively with others using computers.

Distance learning and videoconferencing are concepts made possible with the use of an electronic classroom or boardroom accessible to people in remote locations. Vast databases of information are currently available to users of the Internet, all of whom can send mail messages to each other. The information superhighway is designed to significantly expand this interactive connectivity so that so people all over the world will have free access to all these resources.

People power is critical to ensuring that hardware, software, and connectivity are effectively integrated in a socially responsible as well. People - computer users and computer professionals - are the ones who will decide which hardware, software, and networks endure and how great an impact they will have on our lives. Ultimately people power must be exercised to ensure that computers are used not only efficiently but in a socially responsible way.

Keywords:

| Tiny computing devices | Medical equipment |

Exercises:

Read the passage then choose the correct answer of the following

questions:

- (1) One of these devices does not use Computers on a chip:
- (A) Cars
- (B) Home appliances
- (C) Cables
- (D) Toys
- (2) One of the uses of handhold computers mentioned in the texts:
- (A) Collecting data
- (B) Watching TV
- (C) Navigating maps
- (D) Texting messages

(3) One of the benefits of using computers on security systems is:

- (A) Improving energy
- (B) Call Forwarding
- (C) Resulting in safer Environment
- (D) Texting messages
- (4) One of the benefits of using computers on cars is:
- (A) Improving energy
- (B) Call Forwarding
- (C) Resulting in safer Environment
- (D) Texting messages

(5) One of the benefits of using computers on Phones is:

- (A) Improving energy
- (B) Call Forwarding
- (C) Resulting in safer Environment
- (D) Texting messages

(6) The following smart devise is mentioned in the text

- (A) Smart phones
- (B) Smart robot
- (C) Smart watch
- (D) Smart lights

(7) One of the uses of smart cards is:

- (A) To forward call
- (B) To send data
- (C) To store vital information
- (D) To collect information

(8) Multimedia can make information:

- (A) Difficult for people to understand
- (B) More interesting and appealing
- (C) Confusing and puzzling
- (D) Translated

(9) Medical experts systems can:

- (A) Conduct surgeries
- (B) Prescribe drugs
- (C) Arranging appointments
- (D) Substituting doctors

(10) Computers can help disabled by:

- (A) Arranging their times
- (B) Help to communicate effectively
- (C) Help in dealing with cars
- (D) Facilitate writing

(11) Available computing systems for people in remote places who use electronic classrooms:

- (A) Multimedia designing programmes
- (B) Video games
- (C) TV podcasting progammes
- (D) Distance learning and video conferencing

Re-read the text to find if the following statement True, False or not mentioned:

- (12) Desktop organizers are programs that require desktop computers:
- (A) True
- (B) False
- (C) NOT Mentioned
- (13) Computers are sometimes used to monitor systems that previously needed human supervision:
- (A) True
- (B) False
- (C) NOT Mentioned
- (14) Networking is a way of allowing otherwise incompatible systems to communicate and share resources:
- (A) True
- (B) False
- (C) NOT Mentioned
- (15) The use of computers prevents people from being creative:
- (A) True
- (B) False
- (C) NOT Mentioned
- (16) Computer users do not have much influence over the way that computing develops:
- (A) True
- (B) False
- (C) NOT Mentioned

Mark the following statements as True or False

- (17) Desktop organizers are programs that require desktop computers
- (18) Computers are sometimes used to monitor systems that previously needed human supervision

(19) Networking is a way of allowing otherwise incompatible systems to communicate and share resources

- (20) The use of computers prevents people from being creative
- (21) Computer users do not have much influence over the way that computing develops

Match the terms in Table A with the statements in Table B.

| Table A | Table B | |
|------------------|---|--|
| a. Edutainment | 1. Software that enables computers to | |
| b. Multimedia | "think" like experts. | |
| c. Expert system | 2. Use computers to stay in touch with the | |
| d. Telecommute | office while working at home. | |
| e. Information | 3. Internet system designed to provide free, | |
| f. superhighway | interactive access to vast resources for people | |
| | all over the world. | |
| | 4. Multimedia materials with a combination of | |
| | educational and entertainment content. | |

TOPIC (7)

Leadership in Times of Change

Recent research in the field of educational administration and leadership has focused on the process of change within organizations. Organizational theorists have sought out and analyzed successful examples of adaptation and transformation in the corporate and public sectors of North American and Britain to define leadership and to model leadership practice. Current understandings of effective leadership have focused on characteristics demonstrated by leaders to promote innovation and get results in situations of complex change. They seek to describe the skills needed to take advantage of the window of opportunity created for innovative ideas and novel solutions to old problems when the status quo is disturbed. They model the ways in which leaders steer or guide the change process to achieve desired goals.

Current models of leadership in change have been developed from the analysis of individual case studies on the one hand, and from the projections of the skills needed to operate effectively given current understandings about the processes involved in organizational change. Leadership has been defined in terms of recognition accorded Vision and Leadership in Educational Administration . by contemporaries, and effective leadership by the goals attained by the organizations being led.

Kanter, analyzing effective leaders in change situations, refers to them as 'the right people in the right place at the right time'. She notes they have ideas that move beyond their organizations established practice and that can be formed into a vision. These leaders operate in an environment that supports innovation and encourages the

building of coalitions and teams, at moments in the flow of organizational history when it is possible to 'reconstruct reality on the basis of accumulated innovations to shape a more productive and successful future'.

Kotter's eight-stage model of leading change also incorporates teambuilding, forming and communicating a vision, and the need to attend to the human, political and symbolic elements of an organization.

Senge stresses the need for leaders of 'learning communities' to understand the complexities of the change process and to communicate this understanding throughout the organization. The elements of these models are echoed by researchers more specifically concerned with the field of education. Sergiovanni discusses the symbolic role of educational leaders. Evans stresses relationship building and understanding of the effects of change on different constituents within educational organizations, together

with the need for strong, underlying moral purpose to be apparent throughout the process.7 Fullan describes five core competencies for leading in a culture of change –attending to a broader moral purpose; keeping on top of the change process; cultivating relationships; sharing knowledge; and a vision and context for creating coherence

in organizations. Gardner explores the complex processes involved in moving people to change their minds, noting that leaders are, by definition, people who must change minds.

Can these models of leadership provide useful tools for the historian of educational administration and leadership? Can an analysis of leadership in a historical context draw on, and ultimately inform, current theorizing and model-building concerning the nature of effective leadership in a context of societal change?

This article seeks answers to these questions with an analysis of Sir George White's life and leadership in the field of education. I am appreciative that a number of theories exist which may not be fully compatible, and that some commentators would dispute the contention that models developed in the corporate field can be applied to education organizations. It may also be considered opportunistic to use only certain features of several models for the analysis proposed. However, consensus clearly exists amongst the models regarding the leadership traits that favors success in situations where society and culture is changing, and organizations must change to be effective in the new conditions that result. I will use these leadership traits – leading with a clear moral purpose, cultivating relationships, creating coherence through the communication of a strong vision, sharing knowledge, and understanding the possibilities offered by change in a particular context or environment - to frame my analysis of George White's leadership. I have also sought to identify those aspects of his career that differ significantly from the models and which I believe provide an opportunity for further critique of the mode

Key words:

- Educational Administration Leadership.

- Transformational Leadership.

- Organizations.
 - Innovation, vision.

TOPIC(8)

Special education

Some children are disabled, or they have learning difficulties. **Special education** is about teaching these children. Some of them can be educated with other children of the same age who are not disabled. Others must go to special schools. If the disability is too bad they cannot get an education. Students who have emotional problems and act poorly are sometimes expelled from school. Inclusive education is affirmed by the Convention on the Rights of Persons with Disabilities to reduce such exclusion.

Special needs include speech or hearing difficulties, emotional and behavioral disorders, physical disabilities, and developmental disorders. Students with these special needs often get more educational services. This may mean different approaches to teaching, access to a resource room and use of technology.

Some students are very smart. These students are called gifted. They also have certain needs so they can succeed. These students do better with special teaching styles or different educational programs. The word 'special education' is used for students whose special needs stop them from learning the way normal people learn. Gifted education is handled separately.

Schools provide special education services to special students.

- **Regular classroom** This is when students with special educational needs is in the regular classes for the whole day. This may sometimes be used for individuals with mental retardation who are integrated in regular classes. A teacher's aide may be helpful in helping these special students function. Mostly this is for students who are able to function with the typical education in regular classroom but may need a few adjustments in their education.
- **Regular classroom with assistance** These students are in a regular classroom but simply require a bit more help from a teacher trained to deal with their special needs.

- **Collaboration** The classroom teacher and a teacher trained to deal with special needs work together to provide adequate services for students with special needs.
- **Resource room** These students require instruction to be modified or specialized. They are in regular classes for most of the day but spend time in a resource room.
- Separate classroom or Self-contained classroom These students need to be in a designated classroom designed to meet their special needs.
- Separate school or Special school These students are in another school for students with special needs.
- **Residential school** or **Boarding school** These students may live in a school to receive special services.
- *Home or hospital Students may need services at home or hospital when the school is not an appropriate setting.*

Most schools around the world use inclusion, which means children with special needs, need to earn their right to be in the regular classroom. Sometimes schools may use full inclusion for certain students such as those with mental retardation. In that case, this is where social tolerance is afforded rather than if these students actually do earn their right to be in regular classroom. Sometimes mainstreaming is used, this is when children with special needs are in regular classroom settings as much as possible and put in special classes for the rest of the day. Social integration is used for students with special needs who are in a resource room or other special class for the rest of the time.

Key words:

- Special education.
- Assistance.
- Regular.
- Separate .

<u>Exercises:</u>

Ex.1: Read the sentences and answer them by true or false:

- 1. disabled, child have learning difficulties. (True false)
- 2. Some of disabled children can be educated with other children of the same age who are not disabled. (True false)
- 3. Special needs does not include speech or hearing difficulties. (True false)
- 4. Students with special needs often need more educational services. (True – false)
- 5. different approaches of teaching, used in a resource room. (True false)

Ex.2: Match between the concept in the first column and its meaning or related word in the second column:

| No. | Concept | Concept meaning |
|-----|-------------------------|---------------------------------|
| 1 | Exceptional talent | a. Achievement |
| 2 | Academic ability | b. motivation comes from within |
| 3 | intrinsically motivated | c. Based gifted |
| | · | d. Non of the above |

Ex.3: Match between the concept in the first column and its meaning or related word in the second column:

| No. | Concept | Concept meaning |
|-----|--------------|---------------------|
| 1 | Taxonomy | a. Invention |
| 2 | Intelligents | b. Classification |
| 3 | Creativity | c. Mental ability |
| | | d. Non of the above |

Ex.4: Match between the special education alternative in the second column and its meaning in the first column:

| Q.no. | Meaning of SP. E alternative | Alternative |
|-------|--|--|
| 1 | for students who are able to function with the typical education in regular classroom but may need a few adjustments in their education. | Resource room |
| 2 | for students who are simply require a bit more help from a teacher trained to deal with their special needs | Regular classroom with assistant teacher |
| 3 | The classroom teacher and a teacher trained to deal with special needs work together to provide adequate services for students with special needs. | Separate classroom or special school |
| 4 | for students require instruction to be modified or specialized. They spend som time out of classroom to meet ther needs. | Regular classroom |
| 5 | Another classroom designed to meet their special needs. | Collaboration |

TOPIC (9)

Fitness

57

Balance Training.

57

A U.S. Marine performing a fitness routine.

The President's Council on Physical Fitness and Sports — a study group sponsored by the government of the United States—declines to offer a simple definition of physical fitness. Instead, it developed the following chart:

| | Physiological | | Health related | | Skill related | | Sports |
|---|----------------|---|------------------|---|---------------|---|------------|
| • | Metabolism | • | Body composition | • | Agility | • | Team sport |
| • | Morphological | • | Cardiovascular | • | Balance | • | Individual |
| • | Bone integrity | | fitness | • | Coordination | | sport |
| • | Other | • | Flexibility | • | Power | • | Lifetime |

| • Muscular | • Speed | • Other |
|-----------------|----------|---------|
| endurance | Reaction | |
| Muscle strength | time | |
| | • Other | |

A comprehensive fitness program tailored to an individual typically focuses on one or more specific skills,^[2] and on age-^[3] or health-related needs such as bone health.^[4] Many sources^[citation needed] also cite mental, social and emotional health as an important part of overall fitness. This is often presented in textbooks as a triangle made up of three points, which represent physical, emotional, and mental fitness. Physical fitness can also prevent or treat many chronic health conditions brought on by unhealthy lifestyle or aging.^[5] Working out can also help people sleep better. To stay healthy it is important to engage in physical activity.^[6]

The U.S. Centers for Disease Control and Prevention encourages the adult public, ages 18 to 64, to engage each week in at least one and a quarter hours of vigorous-intensity aerobic activity or two and a half hours of moderate-intensity aerobic activity; that time can be met in any increments.^[7]

Diet is an important component to overall health that works best in combination with exercise.^[citation needed] A balanced diet and exercising regularly are important for maintaining good health. Obesity is defined as body mass index, a measure of weight in relationship to height (Blair, 1993). With obesity on the rise, the U.S. has implemented more exercise and diet plans. There are millions of programs, websites, television shows, magazines, and movies regarding health and fitness. Recently, the trends of diets and lifestyle habits have become more and more encouraged. Understanding the importance of the health benefits resulted from diet and exercise will help decrease the amount of obesity in this country. Physical activity and exercise is defined in terms of type, intensity, duration and frequency (Blair, 1993).^[8]

Developing research has demonstrated that many of the benefits of exercise are mediated through the role of skeletal muscle as an endocrine organ. That is, contracting muscles release multiple substances known as myokines which promote the growth of new tissue, tissue repair, and various anti-inflammatory functions, which in turn reduce the risk of developing various inflammatory diseases.^[9]

How much physical activity do adults need ?

Aerobic activity – what counts?

Aerobic activity or "cardio" gets you breathing harder and your heart beating faster. From pushing a lawn mower, to taking a dance class, to biking to the store – all types of activities count. As long as you're doing them at a moderate or vigorous intensity for at least 10 minutes at a time.

Key words:

- Physiology.
- Fitness.
- Aerobic activity.

References:

Exercises:

- Chose the correct answer between the brackets :-

- overall fitness Programs focus on (health - Age - skills - all true)

Centers for Disease Control and - The U.S.

encourages the adult public, ages 18 to 64, to engage Prevention each week in at least(one and a quarter hours –tow-three-all true)

- overall fitness related Consists of - fitness (emotional - mental - emotional – health)

- Exercise helps the individual to enjoy life more (high - low - bad - not good)

TOPIC (10)

Physical activity improves quality of life

Do you want to add years to your life?

Or life to your years?

Feeling your best boosts your zeal for life!

The American Heart Association recommends 30-minutes of moderate activity, but three 10-minute periods of activity are as beneficial to your overall fitness as one 30-minute session. This is achievable! Physical activity may also help encourage you to **spend some time outdoors**. Sunlight on your skin helps your body produce vitamin D, which brings many added health benefits.

Here are some reasons why physical activity is proven to improve both mental and physical health.

Physical activity boosts mental wellness.

Regular physical activity can relieve tension, anxiety, depression and anger. You may not only notice a "feel good sensation" immediately following your physical activity, but most people also note an improvement in general well-being over time during the weeks and months as physical activity becomes a part of your routine.

Exercise increases the flow of oxygen which directly affects the brain. Your mental acuity and memory can be improved with physical activity.

Physical activity improves physical wellness.

Stronger immunity

It enhances your immune system and decreases the risk of developing diseases such as cancer and heart disease.

Reduced risk factors

Becoming more active can lower your blood pressure by as much as 4

to 9 mm Hg. That's the same reduction in blood pressure delivered by some antihypertensive medications. Physical activity can also boost your levels of good cholesterol.

Physical activity prolongs your optimal health.

Without regular physical activity, the body slowly loses its strength, stamina and ability to function well. And for each hour of regular exercise you get, you'll gain about two hours of additional life expectancy, even if you don't start until middle age. Moderate exercise, such as brisk walking, for as little as 30 minutes a day has the proven health benefits listed above as well as:

- Improves blood circulation, which reduces the risk of heart disease
- Keeps weight under control
- *Helps in the battle to quit smoking*
- Improves blood cholesterol levels
- Prevents and manages high blood pressure
- Prevents bone loss
- Boosts energy level
- Helps manage stress
- Releases tension
- Promotes enthusiasm and optimism
- Counters anxiety and depression
- Helps you fall asleep faster and sleep more soundly

Key words:

- Physical education.
- session
- flow of oxygen.
- blood pressure.

Exercises:

- Chose the correct answer between the brackets :-

-Exercise helps to increase the flow (oxygen – nitrogen - oxide - carbon).

-Regular physical activity can relieve(tension – anxiety- depression-all true)

-The American Heart Association recommends 30minute activity(in door-out door- street-moll)

- Exercise helps to Reduced risk factors such as(blood pressure – cholesterol-heart attack-all true).

TOPIC (11)

Art Education

The meaning of art education today is wider and deeper than it was half a century ago. In the near past its meaning was limited to the reaching of drawing with a priori concept of what is right and wrong. The teaching was confined to certain rules adopted by the teacher. The student had to memorize these rules in order to achieve the correct results. May he not follow these rules, his drawings were rejected the inclination of teaching drawing was perceptual. Reality was supposed to be in the object. The appearance used to be accepted was the photographic.

Nowadays art education means the complete development of skills, attitudes habits, knowledge, and aesthetic reaction to the external world. Art education develops creativity, good taste, aesthetic behavior. it hightens each individual's sense of discrimination. He can distinguish the good from the bad, the tasteful from the distasteful, the beautiful from the ugly and the creative from the stereotyped. Art education develops open mindedness toward the new Lindermans are of the opinion that: "students delight in opportunities to work creatively with various highly manipulative media. An involvement with arts and crafts enables children to invent, construct, and express ideas without hesitation over the type of media being used...

There are other views concerning the function of art education. Among these view is the therapeutic. When children express themselves spontaneously without any coercive influence, their expression contains symbols of a variety of ideas which help in therapy.

Art educators believed that the intellectual emotional, physical, and creative processes involved in producing art would help the child achieve an integrated, well rounded personality... Today this philosophy of art education is called the developmental point of view; in the process of giving visual from to experiences the child's whole being is active.

Key words:

| drawing attitudes habits | Skills | rules | Creativity |
|--------------------------|--------|-------|------------|
|--------------------------|--------|-------|------------|

| good taste | aesthetic behavior | Crafts | creatively | Invent |
|------------|--------------------|-------------|---------------------|---------------|
| construct | type of media | therapeutic | expression | Symbols |
| emotional | creative processes | physical | rounded personality | producing art |

TOPIC (12)

At Creative Children's Center

At **Creative Children's Center** we believe in building a child's self esteem on a foundation of acceptance, encouragement and respect. Each student's ideas are nurtured producing an environment conducive to developing independence, creativity, and confidence. Children are encouraged to solve problems while they explore and interact with ideas and the materials presented. Education forms a partnership with the child's own interests, creating a lifelong love to learn.

We see children as competent inspired learners, with unlimited potential. As an exceptional cooperative school, we provide a rich educational environment, engaging curriculum, inspired teachers, and endless learning opportunities. Partnering with families, together we form a neighborhood where children and adults connect in joyful learning and exploration of life.

About Us

Founded in 1990, Creative Children's Center offers classes for children ages two through third grade. In the summer months our Creativity Summer School expands to grade six and welcome teen counselors. Our program is located on the border of two Oregon communities, Hillsboro and Beaverton.

Once a farm and vineyard, CCC has kept it's unique country appeal, with three dynamic classrooms, a nature inspired playground, and gardens designed by students and caring adult friends.

Our director, Lucy Chaillé, has worked in partnership with parents and teachers, creating a program that is a true collaboration. We believe in a child's right to a quality education, guided by loving adults working in unison with children.

Our leadership team has been actively engaged in the study of the schools in Reggio Emilia, Italy, who like us, believe in **social constructivist education** and the Rights of Children. We have been pleased to welcome Amelia Gambetti and Lella Gandini to our campus as we adapt the Reggio Approach to our learning community and thank them for their guidance and support.

Our Philosophy

CCC embraces constructivist education while incorporating the Reggio Approach to projects and learning. Constructivism is not a "method" of teaching, but rather a theory regarding how we all learn. Constructivist educators put the emphasis on the **process**, and instead of how "best to

teach", we strive for "how best to learn".

As an arts and science school we encourage children to approach learning with enthusiasm and joy. Children's minds naturally construct knowledge by engaging in the process, searching for meaning, synthesizing information, interpreting ideas, adapting their theories, and sharing what they think. This process allows us to **construct understanding**; growing our minds, hearts and souls.

Brain Based Learning

Neurological science has shown that the human mind flourishes when actively engaged in experiences, often referred to as **experiential** *learning*. By providing a structured, yet flexible day, with hands on activities, and investigative projects, children look forward to school with a sense of adventure. Our Teachers design an innovative curriculum that supports both critical and creative thinking skills that grow with the children as they age. We incorporate Dr. Howard Gardner's work on Multiple Intelligences, touching the learning styles of each individual child. Teachers, children and parents partner together as they participate in the classroom, on fieldtrips, and in projects launched by the children's ideas. Education is not seen as a straight path, but rather a lifelong journey filled with endless possibilities.

Our Curriculum

At CCC we take an interdisciplinary approach to teaching. Our indoor and outdoor spaces are seen as "Laboratories for Learning", where ideas grow and flourish. As a progressive school, a wide variety of subjects weave in and out of our interdisciplinary approach. Academic skills grow naturally as literature, language arts, and mathematics are integrated into children's daily work and play. Students of all ages feel appreciated as they share their knowledge with others and connect "big ideas" across the curriculum. At CCC, numbers and letters, stories and songs, paint and clay, wire and wood, dance and drama, are just a few of the "100 languages" children use to express their ideas and knowledge.

Our Programs

Creative Children's Center is a unified family program that crosses over many years .

Beginning with the Play Pals, our two and three year old students explore the classroom with the support of a teacher and parent helpers. Early art and sensory activities enhance the child's view of the world in which he or she lives.

Our Preschool and Pre-K programs increase the classroom

time and learning experience. The teachers prepare a curriculum that focuses on skills in all the developmental areas: physical, social, emotional, and intellectual, helping children to establish a strong foundation for the future. In our multi-age classrooms, children work together as a team exploring a variety of learning areas: the message/writing center, sensory tables, painting, studio arts, dramatic play, construction/blocks, literacy, light tables, science and more. Like the old one room schoolhouse, children support each other's learning while reaching individual milestones. In multi-age classrooms students are able to stay with the same teacher for two to three years. Parents may choose a two, three or five day program, increasing time as your child grows.

Learn more...

At CCC we design our K-3 elementary school especially for enthusiastic, older learners. Considering the National Association for the Education of the Young Child guidelines, the program promotes academic learning in fun and innovative ways. The class introduces children to new ideas with activities that are meaningful in their own lives. Activities include: fieldtrips, cooking, language and literature, science and environmental studies, math and technology, creative dance and theatre, and physical education.

Learn more...

Every spring CCC teachers hold conferences on each student progress. In the grade school program children share their portfolios and participate in the conference, promoting a sense of ownership with regards to their own education and future studies.

In the summer we have classes for older children along with our teen counselor in training program, (TCT).

Exercises:

1. Put true (T) or false (F) next to each of the following sentences:

- a. Creative Children's Center (CCC) offers classes for children ages three through second grade.(.....)
- b. Inspired teachers and partnering with families are part of a rich educational environment provided at CCC to ensure endless learning opportunities. (......)
- c. Constructivism is a theory regarding how we all learn.(.....)
- d. Constructivist educators put the emphasis on how "best to teach". (.....)
- e. Experiential learning means that the human mind flourishes when actively engaged in experiences. (.........)
- f. Interdisciplinary approach to teaching is considered at CCC. (.....)
- g. At CCC each student progress is demonstrated every summer in conferences held by their teachers.(.....)
- h. Classes for older children are provided in the summer.(.....)
- *i.* CCC summer school expands to older-grade students.(....)

TOPIC (13)

Kindergartens

We continue to work towards securing adequate support for councils in the planning and implementation of reforms to kindergarten services including, increasing staff – student ratios and universal access of 15 hours of kindergarten a week for all eligible children.

Strategic plan

<u>2012</u> – Kindergartens continue to be an area of major priority in our . <u>2013 strategic plan</u>

During 2012 – 2013 we will:

produce an updated report on the status of councils' planning for the implementation of the reforms for use as an advocacy tool for additional planning resources for councils and funding for delivery and infrastructure.

seek changes in the bilateral agreement between the Victorian and Australian Governments to address local government issues.

advocate for state – national workforce strategies to increase, align and address Productivity Commission recommendations.

conduct a campaign for capital funding from the Australian and Victorian Governments to provide the required early years' service infrastructure.

conduct quarterly central briefings and three regional briefings to share innovative planning and service delivery models to meet community demand for early years services.

continue to resource and support councils in developing innovative planning and service delivery models to meet community demand for early years services and to implement the early childhood quality reforms. advocate to retain the Victorian model of provision of the maternal` and child health service in the national health and primary care reform scenario, and review the service focus to respond to vulnerable children in the next memorandum of understanding.

Long day care & integrated children's centres

Long day care and integrated children's centres provide education and care for children from birth to school age. Services generally operate for at least 10 hours a day from Monday to Friday for a minimum of 48 weeks each year.

Many of these services also offer a kindergarten program which is integrated into the education and care program.

Key words:

-Kindergartens.

- Integrated.

Exercises:

- 2. Choose the correct answer from i, ii, or iii of the following sentences:
 - a. Long day care and integrated children's centers provides
 - *i. educational service only*
 - *ii. care service only*
 - *iii. both educational and care*
 - b. Services in long day care and integrated children's centers operate for at least

- *i.* 10 hours a day
- *ii.* 5 hours a day
- *iii. 3 hours a day*
- *c.* The yearly minimum operating service in long day care and integrated children's centers is
 - *i.* 8 months
 - *ii.* 48 weeks
- *iii.* 10 months

3. Put true (T) or false (F) next to each of the following sentences:

a. Many of long day care and integrated children's centers offer a kindergarten program as well

(.....)

b. The targeted children age of long day care and integrated children's centers is within the normal school age (......)

TOPIC (14)

Family socialization

Family Socialization begins a process through which humans learn and develop to be the adult persons they become, From the first moments of life, we begin a process of socialization. Socialization is when we learn to become members of society by gaining the skills, values, behaviors and habits of the culture we are living in. We learn by listening and watching what the people around us do, we then copy those actions to become a normal member of our society

Socialization, as a lifelong interactive process of cultural learning, involves different types of social actors. Agents of socialization are the individuals, groups and institutions that create the social context in which socialization takes place. It is through agents of socialization that individuals learn and incorporate the values and norms of their culture as well as their various positions in the social structure.

One of the aims of socialization is to make the individual acceptable to the society. In the societal perspective, the function of socialization is to enable its members play different roles and interact so that the individual and the group can function as a whole. Socialization, in other words, aims at teaching the individual to behave within a social context and to integrate him into the society. The preceding objectives of socialization may be categorized into the following.

- To teach fundamentals of life in society.
- To transmit basic skills into the individuals .
- To ensure that the individual is capable of fulfilling social roles

- The development of trust
- The development of independence
- The tendency to take initiative
- The sense of competence and ambition
- Decisions about who one is
- Relationships with others
- Reflections on one's life

Key words:

-family.

- socialization.

Exercises:

Answer the following question

Choose the correct answer " a , b or c "

- *1-* We begin a process of socialization from
 - *a-* Adolescence *b-* adulthood *c-* the first moments of life
- 2- We learn the skills, values, & of the culture we are living in .

a- Knowledge & history b- behaviors & habits c- habits & history

- - *a- listening* & *watching b- watching* & *coping c- listening* & *recording*
- 4- The process of socialization develops
 - a-Knowledge b-trust c-valves

<u>Read carefully then put (right) or (wrong)</u>

- 1- The preceding objectives of socialization may be categorized into teach fundamentals of life in society ()
- 2- The preceding objectives of socialization may be categorized not to tendency to take initiative ()

<u>Read the passage then answer the following questions ?</u>

- 1- When does socialization begin?
- 2- How do you learn ?
- 3- What are agents of socialization ?
- 4- What are the aims of socialization ?
- 5- What is the function of socialization ?
