Professional Summary

Graduated from King Saud University from the college of Medical applied sciences from biomedical technology department. I did one-year internship at King Khalid university hospital as a biomedical engineer. I was exposed to variety of medical devices, machines and technology. I learned how to set most of the medical devices and how to perform maintenance and procedures of safely connecting and disconnecting the medical devices. I worked for the Saudi Food and Drug administration for four months as a medical devices' specialist. Where I worked on comparing the national with global regulations of the medical devices. I joined King Saud University in 2009 where I taught two semesters before getting my master degree in biomedical engineering from Wright State University. Currently I am a lecturer at King Saud University in Medical applied sciences college.
