## Second Midterm Exam

| Sunday, 20 Rabee I, 1441 | STAT 105 | Academic year <br> $1440-1441$ |
| :--- | :--- | :--- |
| $7: 00-8: 30 ~ p m$ |  | First Semester |
| Student's Name | ID number |  |
| Section No. | Serial No. |  |
| Teacher's Name | Classroom No. |  |

## Instructions:

- Switch off your mobile and place it under your seat.
- Time allowed is 90 Minutes.
- Do not copy answers from your neighbors. They have different sets of questions.
- Choose the nearest number to your answer.
- Do not use pencils or red pens.
- For each question, put the code (A, B, $\cdots$ Capital Letters, and clear) of the correct answer in the following table beneath the question number.

| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $D$ | $D$ | $C$ | $D$ | $B$ | $D$ | $B$ | $D$ | $D$ | $B$ |
| 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 |
| $D$ | $D$ | $C$ | $A$ | $C$ | $C$ | $B$ | $D$ | $D$ | $B$ |
| 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 |
| $C$ | $A$ | $D$ | $B$ | $D$ | $C$ | $C$ | $C$ | $D$ | $A$ |

Questions (1-3): An experiment reported in Popular Science compared fuel economies for two types of similarly equipped diesel mini-trucks. Let us suppose that 31 Volkswagen and 25 Toyota trucks were tested in 90-kilometer-per-hour steady- paced trials. If the 31 Volkswagen trucks averaged 15 kilometers per liter with a standard deviation of 1.5 kilometers per liter and the 25 Toyota trucks averaged 10 kilometers per liter with a standard deviation of 1.0 kilometer per liter. Assume that the distances per liter for the truck models are approximately normally distributed with equal variances.

1) The point estimate of $\left(\frac{\sigma_{1}}{\sigma_{2}}\right)^{2}$ is equal to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 1.50 | 1.75 | 2.00 | $\underline{2.25}$ |

2) The lower bound of the $98 \%$ confidence interval of $\left(\frac{\sigma_{1}}{\sigma_{2}}\right)^{2}$ is equal to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 0.025 | 0.125 | 0.225 | $\underline{0.872}$ |

3) The upper bound of the $98 \%$ confidence interval of $\left(\frac{\sigma_{1}}{\sigma_{2}}\right)^{2}$ is equal to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 3.027 | 1.675 | $\underline{\underline{5.557}}$ | 4.015 |

Questions (4-11): Two kinds of thread are being compared for strength. Fifty pieces of Brand $A$ and fifty-five of Brand $B$ of thread are tested under similar conditions. Brand $A$ has an average tensile strength of 80 kilograms with a standard deviation of 6 kilograms, while brand $B$ has an average tensile strength of 95 kilograms with a standard deviation of 8 kilograms. To construct a $95 \%$ confidence interval for the difference of the population means.
4) The standard error of the mean of Brand B is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 1.529 | 1.635 | 1.721 | $\underline{1.08}$ |

5) The lower bound of $95 \%$ confidence interval for the mean of Brand B is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 100.21 | $\underline{92.89}$ | 111.12 | 114.54 |

6) The upper bound of $95 \%$ confidence interval for the mean of Brand B is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 100.12 | 89.22 | 92.31 | $\underline{97.11}$ |

7) The point estimate of the difference between the two population's means $\mu_{B}-\mu_{A}$ equals to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 25 | $\underline{15}$ | 27 | 18 |

8) The tabulated value (critical point) for the $96 \%$ ci equals to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 1.65 | 2.58 | 3.25 | $\underline{2.05}$ |

9) The standard error of the difference between the two sample's means $\sigma_{\bar{X}_{B}-\bar{X}_{A}}$ equals to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 2.45 | 1.64 | 3.24 | $\underline{1.37}$ |

10) The lower bound of the $95 \%$ confidence interval of the difference between the two population's means $\mu_{B}-\mu_{A}$ equals to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 10.21 | $\underline{12.31}$ | 11.12 | 14.54 |

11) The upper bound of the $95 \%$ confidence interval of the difference between the two population's means $\mu_{B}-\mu_{A}$ equals to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 15.12 | 19.22 | 12.31 | $\underline{17.69}$ |

Questions (12-15): A survey of 500 students found that 240 chose professional baseball team $A$ as their favorite team. In a similar survey involving 1000 students, 250 of them chose team $A$ as their favorite, then:
12) The point estimate of the difference between the two population's proportions equals to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 0.15 | 0.51 | 0.32 | $\underline{0.23}$ |

13) The tabulated value for the $98 \%$ confidence interval equals to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 2.65 | 1.96 | $\underline{2.33}$ | 1.35 |

14) The lower bound of the $95 \%$ confidence interval of the difference between the two population's proportions is equal to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| $\underline{0.179}$ | 1.011 | 2.125 | 1.645 |

15) The upper bound of the $95 \%$ confidence interval of the difference between the two population's proportions is equal to:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 0.064 | 0.111 | $\underline{0.281}$ | 0.325 |

Questions (16-19): Data are collected from a random sample of 500 subscribers. The results indicate that 100 of the subscribers would upgrade to a new service at a reduced cost. Test $\mathrm{p}<0.23$ at $\alpha=0.05$.
16) The critical region (rejection region) is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| $>-1.645$ | $<1.645$ | $\leq-1.645$ | $>1.645$ |

17) The alternative hypothesis $H_{1}$ is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| $p \geq 0.23$ | $p<0.23$ | $p>0.23$ | $p \leq 0.23$ |

18) The test statistic is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| -1.645 | 1.645 | 1.59 | $\underline{-1.59}$ |

19) The decision is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| all of them | can not decide | reject $H_{0}$ | accept $H_{0}$ |

Questions (20-23): The life in hours of a battery is known to be approximately normally distributed, with standard deviation $\sigma=1.5$ hours. A random sample of 9 batteries has a mean life of $\bar{x}=41$ hours. Test the claim that battery life exceeds 40 hours, using $\alpha=0.05$.
20) The alternative hypothesis $H_{1}$ is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| $\mu \geq 40$ | $\mu<40$ | $\mu>40$ | $\mu \leq 40$ |

21) The critical region (rejection region) is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| on the left. | on the right | on the middle. | on both sides. |

22) The sampling distribution of $\bar{x}$ is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| normal. | F. | Student-t. | chi-square. |

23) The decision is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| accept $H_{0}$ | all of them | can not decide | reject $H_{0}$ |

Questions (24-26): Two independent samples were taken from two populations with means $\mu_{1}$ and $\mu_{2}$, respectively, resulted in the following :

| Sample $i$ | $\bar{x}_{i}$ | $n_{i}$ | $\sigma_{i}$ |
| :---: | :---: | :---: | :---: |
| 1 | 36 | 35 | 6 |
| 2 | 39 | 40 | 8 |

Is $\mu_{1}$ smaller than $\mu_{2}$ at $\alpha=0.05$ ?
24) The test statistic equals:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 1.53 | $\underline{-1.85}$ | -1.53 | 1.85 |

25) The critical value equals:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| -2.11 | -2.38 | -1.96 | $\underline{-1.64}$ |

26) The decision is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| accept $H_{0}$ | all of them | reject $H_{0}$ | can not decide |

Questions (27-30): In a random sample of 25 observations, from a normal distribution it was found that the standard deviation equals 7, is it possible at $\alpha=$ 0.05 , that the standard deviation is less than 9 ?
27) The critical region (rejection region) equals:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| $<15.22$ | $>15.22$ | $\leq 13.85$ | $>13.85$ |

28) The $p$-value is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 0.001 | 0.033 | $\underline{0.066}$ | 0.025 |

29) The test statistic equals:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| 39.67 | 18.67 | 30.85 | $\underline{14.52}$ |

30) The decision is:

| A | B | C | D |
| :---: | :---: | :---: | :---: |
| accept $H_{0}$ | reject $H_{0}$ | all of them | can not decide |
