Abstract

Based on the fingerprint, which is unique for each person, the use of fingerprints is a reliable and convenient way for secure student authentication and it can be used for examination purposes.

The suggested “Secure Examination Authentication Fingerprint System – SEAFS” is consisted of two main parts: hardware and software.

The hardware part includes Administrator Computer and Exam Access Device. The software part includes main functions, system program and system database.

Our goal is – WA allhamdo LLAH – achieved: the system is now ready and it functions well.
