PGE 544: Rock Mechanics

Course Instructor:

Professor Musaed N. J. AlAwad
Room 2B-81
malawwad@ksu.edu.sa

Course Learning Objectives:

By The End of The Course, Students are Able to:

1. Define Stress and Strain in Rocks.
2. Understand Rock Engineering Projects and Mechanical Behavior of Rocks.
3. Characterize Rock Deformation Modes, Rock Mechanical Properties (Destructive and Non-Destructive), and Laboratory Tests.
4. Derive and Utilize Linear-Poroelastic Solution of Stress on Deep Rocks.
5. Understand and Utilize The Concept of Yield-Zone Theory.
6. Understand and Apply Mohr-Coulomb Failure Criterion and The Effect of Pore Pressure on Rock Strength.
7. Calculate Mohr-Coulomb Failure Criterion Parameters and its Applications.
8. Estimate Young's Modulus and Poisson's Ratio Using Experimental Data.
9. Estimate of Mohr-Coulomb Failure Parameters Using Correlations.
10. Utilize The Gained Rock Mechanics Knowledge in Rock Mechanics Applications in Petroleum Engineering Practices.
11. Write and Present a Term Paper Relevant to This Course.

Assessment Criteria:

1. Mid-term Exam 1: 20 Points
2. Mid-term Exam 2: 20 Points
3. Term Paper: 20 Points
4. Final Exam: 40 Points

Course Contents:

Chapter One: Introduction to Rock Mechanics.
Chapter Two: Rock Engineering Applications.
Chapter Three: Mechanical Behavior of Rock.
Chapter Four: Concept of Rock Failure Mechanics.
Chapter Five: Coring and Core Preparation for Mechanical Tests.
Chapter Six: Laboratory Tock Testing and Characterization.
Chapter Seven: Linear Poro-Elastic Solution for Stress State around Boreholes.
Chapter Eight: Yield-Zone Theory for Stress State around Boreholes.
Chapter Nine: Rock Mechanics Applications in Petroleum Engineering Practices.
