## Exercise

Question 1:
Choose the correct answer in the following:
1- An example of nodes is:
a $\backslash$ Roads.
b\Pipes.
c\Airports.
$d \backslash$ Airlines.

2- An example of arcs is:
$a \backslash$ Aircraft. $\quad b \backslash$ Intersections $\quad c \backslash$ Airports. $d \backslash$ Airlines.
3 - according to the following; an example of directed cycle:

$a \backslash A C \rightarrow C A$.
$b \backslash A B \rightarrow B C \rightarrow C A$.
$c \backslash A C \rightarrow C D \rightarrow D A$.
$d \backslash D A \rightarrow A B$

## Question 2:

Use Kruskal's algorithm to find a set of links ( $\mathrm{n}-1$ links for n nodes) with shortest total length - spanning tree

Remember that Kruskal's algorithm the minimum spanning tree of the graph satisfy sub graph including:

- all vertices exist .
- connected
- No cycles .

| Iteration | Connected | Closest unconnected node | Arc |
| :--- | :--- | :--- | :--- |
| 1 | E | D | E-D |
| 2 | E,D | B | D-B |
| 3 | E,D,B | A | B-A |
| 4 | E,D,B,A | G | B-G |
| 5 | E,D,B,A,G | F | G-F |
| 6 | E,D,B,A,G,F | C | G-C |

All nodes are now connected, so this solution to the problem is the desired (optimal) one. The total length of the links is 16 miles
